

ABSTRACT

A display unit of which inspection process to inspect a connector for faulty connection can be automated. The display unit comprises a display section, a display driver IC among a plurality of types of display driver ICs capable of driving and controlling the display section, and an MPU sending a command and display data to the display driver IC. The display driver IC comprises an ID setting circuit and a command decoder decoding the command from the MPU. The MPU reads an ID information so as to control the display driver IC among a plurality of types of display driver ICs according to the corresponding control contents in the storage section among the plurality of types of control contents for a plurality of types of display driver ICs.
